

**Written Testimony of Debra L. Ness
President, National Partnership for Women & Families
on Bill No. 080474, Promoting Healthy Families and Workplaces**

**Submitted to the Council of the City of Philadelphia
Committee on Public Health and Human Services
March 1, 2011**

Thank you for the opportunity to submit testimony in support of Bill No. 080474, the Promoting Healthy Families and Workplaces ordinance. The National Partnership for Women & Families is a non-profit, non-partisan advocacy group dedicated to promoting fairness in the workplace, access to quality health care, and policies that help workers in the United States meet the dual demands of work and family.

Like many across the nation, Philadelphia's working families are struggling harder than ever to make ends meet. For workers without paid sick days, a bad case of the flu or a child's fever can mean the loss of a much-needed paycheck or even a job. Paid sick days policies protect workers' economic security and the health and well-being of their communities. Advocates and legislators in more than two dozen states and cities are pressing for policies that would provide working people the right to earn paid sick days, and two cities have already passed and implemented successful paid sick days laws. We commend the Philadelphia City Council for considering this common-sense policy solution that will help hard-working people across the city to be both responsible workers *and* responsible family members when illness strikes.

**The Economic Security of Working Families and the Well-Being of Our Communities
Suffer When Workers Lack Paid Sick Days**

Everyone gets sick, but too many workers in Philadelphia and across the nation cannot take time away from work to get better. The cost of allowing this to continue, and failing to enact a remedy, is high for Philadelphia families, the community and the city's businesses. That is why establishing a minimum paid sick days standard is so important.

More than 210,000 workers in Philadelphia — about forty percent of the city's private sector workforce — lack paid sick days to use for their own illness.¹ Philadelphia's experience reflects the national reality. Thirty-eight percent of private sector workers in the United States lack paid

¹ Traub, A. (2010, October). *Paid Sick Time: Healthy for Philadelphia Workers and Businesses* (p. 1). Drum Major Institute for Public Policy. Retrieved 25 February 2011, from http://drummajorinstitute.org/pdfs/Philadelphia_paid_sick_brief_FINAL.PDF

sick days to use for their own illness or medical care.² Many more cannot take paid sick time to care for an ill child or family member.³

In this economy, the lack of a paid sick days standard forces too many workers and their families to make the impossible choice between their health and their financial security. At a time when more than three-quarters of workers are living paycheck to paycheck,⁴ and an unemployed worker's search for a new job can stretch well beyond six months,⁵ workers without paid sick days can ill afford to lose two days of pay when they get the flu or risk job loss when they need to take a child to the doctor.

The lack of paid sick days has a particularly significant impact on working women, who continue to be the primary caregivers for their families. Half of working mothers miss work when a child comes down with a common illness, and many of these women — two-thirds of low-income mothers and more than one-third of middle- and upper-income mothers — lose pay when they care for sick children.⁶ Women are now the sole or co-breadwinners in nearly two-thirds of U.S. households.⁷ There is no question that the economic security of families nationwide is put in jeopardy when working mothers have to miss work to care for an ill child.

Too often, workers without paid sick days are forced to go to work rather than care for their health, delaying preventive care or turning to emergency rooms instead of lower-cost health care options. In these cases, potentially treatable problems can become more severe. People without paid sick days are twice as likely as those with paid sick days to use an emergency room because of their inability to take time off of work,⁸ and parents without paid sick days are *five times* more likely to take a child or family member to an emergency room.⁹ In the ongoing national effort to improve the health of Americans and reduce health care costs, the lack of a paid sick days standard is simply bad policy.

What's more, the lack of a paid sick days standard creates serious public health risks. People without paid sick days are 1.5 times more likely to go to work sick than people with paid sick

days.¹⁰ And workers who have the most direct contact with the public are the ones least likely to have access to paid sick days. For example, nearly three out of four food preparation and food service workers have no paid sick days¹¹ and nearly two-thirds of restaurant workers report having worked sick,¹² potentially leading to the spread of contagious illnesses to customers. Similarly, just 27 percent of child care workers have paid sick days,¹³ risking the spread of contagious illnesses to young children. Nearly half of personal care workers (child care and home health care workers who assist the infirm and the elderly) lack paid sick time,¹⁴ causing potentially serious health problems for these vulnerable populations. When disease spreads because workers can't stay home, everyone loses.

Failing to provide workers with paid sick days can also cause a reduction in productivity — which has a ripple effect when disease spreads through the worksite. In fact, lost business productivity due to illness costs an estimated \$180 billion annually.¹⁵ A snapshot from the H1N1 pandemic in 2009 shows why. During a three-month period in the fall of 2009, 26 million workers suffered from H1N1 and eight million workers went to work sick, infecting up to seven million of their co-workers.¹⁶ H1N1 lasted longer in private sector workplaces than in public sector workplaces during those three months — a difference that researchers attribute to the lack of paid sick days in the private sector.¹⁷ Business productivity and efficiency suffer when illness overcomes the workplace.

Promoting Healthy Families and Workplaces (Bill No. 080474): A Common-Sense Policy to Meet the Needs of Philadelphia's Workers and Their Families

The tremendous costs of inaction and the benefits that paid sick days policies have for working families, our public health, our children and our communities are clear. That is why the National Partnership supports a standard that would allow all workers to earn paid sick time. Bill No. 080474 will provide access to earned sick time to more than 210,000 Philadelphia workers.¹⁸

¹⁸ See note 1.

Paid sick days laws in San Francisco and Washington, D.C. have already had a dramatic impact on workers. A recent study of San Francisco workers shows that, as a result of the city's paid sick time law, many of the workers most in need of paid sick days now have access to them.¹⁹ As a result, more than a majority of workers say that they are better able to care for their own health needs and the health needs of their families, that their employers are more supportive of workers using sick time, or that they gained more sick time because of the floor set by the law.²⁰

There is also indisputable evidence refuting opponents' claims that paid sick days laws harm business and job growth. San Francisco's experience shows that businesses — including the smallest businesses — can flourish under a paid sick days standard. In the two years following the implementation of the city's paid sick days law (a time period that includes the recent recession), the number of businesses and jobs in San Francisco grew relative to business and job growth in surrounding counties.²¹ The growth pattern held true even in the industries that made the biggest changes as a result of the law — retail and food service.²²

The experiences of San Francisco businesses show that fears of disruption from a paid sick days standard are vastly overblown. For example, most businesses did not have to make any changes to their policies as a result of the law.²³ And two-thirds of businesses now say they support the law.²⁴ With respect to concerns that workers might overuse paid sick time, the data show that workers in the city used just three sick days per year on average, despite the availability of many more days under the law. One-quarter of all workers did not use *any* sick days within a one-year period.²⁵

A Paid Sick Days Standard: A Public Policy Solution That Works for Everyone

Everyone gets sick. Everyone should have time to get better without jeopardizing their economic security or their families' health and well-being. The National Partnership urges the Philadelphia City Council to adopt the Promoting Healthy Families and Workplaces ordinance without delay to protect the economic security of Philadelphia's working families and the health and well-being of the greater Philadelphia community.
