Quantifying America’s Gender Wage Gap by Race/Ethnicity

SEPTEMBER 2023

Women of color in the United States experience the nation’s persistent and pervasive gender wage gap most severely. The gaps represent the tangible consequences of sexism and white supremacy in the United States and how our country systematically devalues women of color and their labor. The cents-on-the-dollar difference between what men and women are typically paid adds up, resulting in lost wages that mean women have less money to support themselves and their families particularly in the face of rapid inflation.

Latinas and the Wage Gap

Latinas are typically paid just 52 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Latina in the United States is $31,600, while the median annual pay for a white, non-Hispanic man is $60,830 – a difference of $29,230 per year.1 If the annual wage gap were eliminated, a typical Latina working in the United States would have enough money to pay for approximately:

- Thirty-eight months of food;²
- Nearly 33 more months of child care;³
- Six semesters (three years) of tuition and fees

Counting All Women Workers in the Wage Gap

In previous years, conversations about the wage gap focused only on women working full time, year-round. That meant leaving out part-time and seasonal workers – disproportionately women of color – who not only tend to be paid less but also often have less-flexible jobs and fewer benefits. In 2022, more than 27 million women workers would not have been counted in the full-time wage gap.
for a four-year public university, or the full cost of tuition and fees for a two-year college;⁴
- More than twenty-two months of rent;⁵ or
- Eighteen additional months of premiums for employer-based health insurance.⁶

**Black Women and the Wage Gap**

Black women are typically paid just 66 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Black woman in the United States is $40,450, while the median annual pay for a white, non-Hispanic man is $60,830 – a difference of $20,380 per year.⁷ If the annual wage gap were eliminated, a typical Black woman working in the United States would have enough money to pay for approximately:

- Twenty-six months of food;⁸
- Nearly 23 more months of child care;⁹
- Four semesters (two years) of tuition and fees for a four-year public university, or the full cost of tuition and fees for a two-year college;¹⁰
- Nearly 16 months of rent;¹¹ or
- More than 12 additional months of premiums for employer-based health insurance.¹²

**Native American Women and the Wage Gap**

Native American women are typically paid just 55 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Native American woman in the United States is $30,584, and the annual median wage gap between a Native American woman and a white, non-Hispanic man is about $25,275 per year.¹³ If the annual wage gap were eliminated, a typical Native American woman working in the United States would have enough money to pay for approximately:

- More than 32 months of food;¹⁴
- More than 28 more months of child care;¹⁵
Five semesters (nearly three years) of tuition and fees for a four-year public university, or the full cost of tuition and fees for a two-year college;16

More than 19 months of rent;17 or

More than 15 additional months of premiums for employer-based health insurance.18

White Women and the Wage Gap

White, non-Hispanic women are typically paid just 74 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a white, non-Hispanic woman in the United States is $45,190, while the median annual pay for a white, non-Hispanic man who holds a full-time, year-round job is $60,830 – a difference of $15,640 per year.19 If the annual wage gap were eliminated, a typical white woman working in the United States would have enough money to pay for approximately:

More than 20 months of food;20

More than 17 months of child care;21

Nearly two years of tuition and fees for a four-year public university, or the full cost of tuition and fees for a two-year college;22

More than a year of rent;23 or

Almost ten additional months of premiums for employer-based health insurance.24
Asian American, Native Hawaiian and Pacific Islander Women and the Wage Gap

Asian American, Native Hawaiian and Pacific Islander women are typically paid 80 cents for every dollar paid to a white, non-Hispanic man. The median annual pay for an Asian American, Native Hawaiian or Pacific Islander woman in the United States is $40,000, and the annual median wage gap between an Asian American, Native Hawaiian, and Pacific Islander woman and a white, non-Hispanic man is $10,000. If the annual wage gap were eliminated, a typical Asian American, Native Hawaiian or Pacific Islander woman working in the United States would have enough money to pay for approximately:

- Nearly 15 months of food;
- More than 12 months of child care (one year);
- More than two semesters of tuition and fees for a four-year public university, or the full cost of tuition and fees for a two-year college;
- More than nine months of rent;
- Six additional months of premiums for employer-based health insurance.

Women Overall and the Wage Gap

Across all racial and ethnic groups, women in the United States are typically paid 78 cents for every dollar paid to men. The median annual pay for a woman in the United States is $41,320 while the median annual pay for a man is $52,770 – a difference of $11,450 per year. If the annual wage gap were eliminated, a typical woman working in the United States would have enough money to pay for approximately:

- Nearly 15 months of food;
- Almost 13 months of child care;
- More than two semesters (one year) of tuition and fees for a four-year public university, or the full cost of tuition and fees for a two-year college.
Nearly 9 months of rent\(^5\) or
Seven additional months of premiums for employer-based health insurance.\(^6\)

3. Child Care Aware of America. (2022). *Demanding Change: Repairing Our Child Care System*. Retrieved 14 September 2023, from https://www.childcareaware.org/demanding-change-repairing-our-child-care-system. The authors note that the landscape of child care varies significantly from state to state and computing a single national average is complex. This analysis uses the average of program-weighted averages for center-based care for a four-year-old, $9,715 with a 10.84% inflation adjustment to account for the rise in child care costs since 2020 (Inflation adjustment uses the Consumer Price Index data from the U.S. Bureau of Labor Statistics for Day care and preschool) for a total annual cost of $10,768.

5. U.S. Census Bureau. (2023). *American Community Survey 1-Year Estimates 2022, Table DP04: Selected Housing Characteristics*. Retrieved 14 September 2023, from data.census.gov. Note: The Current Population Survey does not provide disaggregated data for Native American women’s earnings. This calculation is based on a comparison of the median earnings of white, non-Hispanic men working full time, year-round with that of Native American women working full time, year-round as reported in the American Community Survey. The median annual earnings of white, non-Hispanic men in 2022 in this source was $55,859.

The National Partnership for Women & Families is a nonprofit, nonpartisan advocacy group dedicated to promoting fairness in the workplace, reproductive health and rights, access to quality, affordable health care and policies that help all people meet the dual demands of work and family.
