FACT SHEET

The Wage Gap #IRL (In Real Life) for Women of Color: Groceries, Child Care and Student Loans

MARCH 2024

Women of color in the United States experience the nation’s persistent and pervasive gender wage gap most severely. The gaps represent the tangible consequences of sexism and white supremacy in the United States and how our country systematically devalues women of color and their labor. The cents-on-the-dollar difference between what men and women are typically paid adds up, resulting in lost wages that mean women have less money to support themselves and their families particularly in the face of rapid inflation.

Latinas and the Wage Gap

Latinas are typically paid just 52 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Latina in the United States is $31,600, while the median annual pay for a white, non-Hispanic man is $60,830 – a difference of $29,230 per year.¹ If the annual wage gap were eliminated, a typical Latina working in the United States would have enough money to pay for approximately:

- thirty-eight months of food;²
- nearly 33 more months of child care;³
- their entire student loan debt in 15 months;⁴

Counting All Women Workers in the Wage Gap

In previous years, conversations about the wage gap focused only on women working full time, year-round. That meant leaving out part-time and seasonal workers – disproportionately women of color – who not only tend to be paid less but also often have less-flexible jobs and fewer benefits. In 2022, more than 27 million women workers would not have been counted in the full-time wage gap.

IF THE WAGE GAP CLOSED FOR ONE YEAR, LATINAS COULD AFFORD:

- almost 17 more months of mortgage and utilities payments;\(^5\) or
- eighteen additional months of premiums for employer-based health insurance.\(^6\)

**Black Women and the Wage Gap**

Black women are typically paid just 66 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Black woman in the United States is $40,450, while the median annual pay for a white, non-Hispanic man is $60,830 – a difference of $20,380 per year.\(^7\) If the annual wage gap were eliminated, a typical Black woman working in the United States would have enough money to pay for approximately:
- twenty-six months of food;\(^8\)
- nearly 23 more months of child care;\(^9\)
- their entire student loan debt in 22 months;\(^10\)
- almost 12 more months of mortgage and utilities payments;\(^11\) or
- more than 12 additional months of premiums for employer-based health insurance.\(^12\)

**Native American Women and the Wage Gap**

Native American women are typically paid just 55 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a Native American woman in the United States is $30,584, and the annual median wage gap between a Native American woman and a white, non-Hispanic man is about $25,275 per year.\(^13\) If the annual wage gap were eliminated, a typical Native American woman working in the United States would have enough money to pay for approximately:
- more than 32 months of food;\(^14\)
- more than 28 more months of child care;\(^15\)
White Women and the Wage Gap

White, non-Hispanic women are typically paid just 74 cents for every dollar paid to white, non-Hispanic men. The median annual pay for a white, non-Hispanic woman in the United States is $45,190, while the median annual pay for a white, non-Hispanic man is $60,830 – a difference of $15,640 per year.\(^1\) If the annual wage gap were eliminated, a typical white woman working in the United States would have enough money to pay for approximately:

- more than 20 months of food;\(^2\)
- more than 17 months of child care;\(^3\)
- their entire student loan debt in less than 29 months;\(^4\)
- almost nine months of mortgage and utilities payments;\(^5\) or
- almost 10 additional months of premiums for employer-based health insurance.\(^6\)
Asian American, Native Hawaiian and Pacific Islander Women and the Wage Gap

Asian American, Native Hawaiian and Pacific Islander women are typically paid 80 cents for every dollar paid to white, non-Hispanic men. The median annual pay for an Asian American, Native Hawaiian or Pacific Islander woman in the United States is $44,819, and the annual median wage gap between an Asian American, Native Hawaiian, and Pacific Islander woman and a white, non-Hispanic man is $11,466. If the annual wage gap were eliminated, a typical Asian American, Native Hawaiian or Pacific Islander woman working in the United States would have enough money to pay for approximately:

- nearly 15 months of food;
- almost 13 months of child care;
- their entire student loan debt in 39 months;
- nearly seven months of mortgage and utilities payments; or
- seven additional months of premiums for employer-based health insurance.

Women Overall and the Wage Gap

Across all racial and ethnic groups, women in the United States are typically paid 78 cents for every dollar paid to men. The median annual pay for a woman in the United States is $41,320 while the median annual pay for a man is $52,770 – a difference of $11,450 per year. If the annual wage gap were eliminated, a typical woman working in the United States would have enough money to pay for approximately:

- nearly 15 months of food;
- almost 13 months of child care;
- their entire student loan debt in 39 months.
nearly seven months of mortgage and utility payments, or seven additional months of premiums for employer-based health insurance.
